

Print Spec Sheet for PostNow | One To One Mailing

These instructions are intended for tech savvy and professional designers. If this doesn't make sense, we are available to assist you like always!

Software Compatibility:

File formats preferred are high-resolution PDF, or packaged InDesign or Illustrator files. These will need to be zipped.

Type Specs:

5 pt. minimum

Fonts:

Include your fonts or outline them. We recommend Sans Serif fonts for small type (6-9 pt.)

Image Area:

Maintain a minimum of 0.25" between artwork and print edge. If artwork continues to edge, 0.25" bleed must be included.

Graphics Specs:

Use print ready files such as logos. Web ready files are not high enough in resolution to print. Ensure your graphics are 300 dpi for clear, not blurry printing.

Bleed:

Standard 0.25" beyond the cropmarks is required.

Add Crop Marks in Canva:

If you use Canva, follow these instructions to add crop marks.

canva.com/help/margins-bleed-crop-marks/

Maximum File Size for PostNow:

Our system will accept files up to 50MB. If your files are larger, we recommend using wetransfer.com as it is quite simple.

Simply send the files to:

printing@onetoone mailing.ca
